

Our NDT Training Courses

Testia has become a reference for training and certification for non-destructive testing. Our training centers across the world provide courses for all NDT methods as well as specialized courses.

Testia Asia Pacific is your local provider of training and examination services in NDT testing, all **in accordance with the EN 4179 / NAS 410 standards**.

We will welcome you in our dedicated state-of-the-art facility – located within the Airbus Singapore Campus – where participants can get their hands on **real parts, components and aircraft structures**. Each course involves a combination of both theory and practical knowledge.

For a better learning experience, we organize sessions with a limited number of participants. Students can therefore benefit from a more personal supervision and are encouraged to interact with our highly experienced trainers.

Upon request, we can also provide **training sessions at customer's site** anywhere in the Asia-Pacific region (provided that appropriate equipment is available on site and an audit performed by the examiner in advance).

We also offer **level 3 services** including: responsible level 3 services, procedure writing, consultancy and audits preparation.

If you wish to register for any of the courses, [please send an email](#) with:
